                                Reticuloendotheliosis virus A.

Viruses; Retroid viruses; Retroviridae; Mammalian type C

retroviruses; 3-Reticuloendotheliosis virus group.

E 1 (bases 1 to 545)

Structural genes, not the LTRs, are the primary determinants of reticuloendotheliosis virus A-induced runting and bursal atrophy 94279132

GenBank staff at the National Library of Medicine created this sequence comes from Fig. 3.

B87 bp ss-RNA

ON Reticuloendotheliosis virus 713 proviral clone RNA.

M 22224 M10660 M16722

M22224.1 GI:209709

long terminal repeat (LTR).

Reticuloendotheliosis virus (from chicken line 151-5 B lymphomas),

CDNA to mRNA, clone 713.

SM Reticuloendotheliosis virus

Viruses; Retroid viruses; Retroviridae; Mammalian type C

retroviruses; 3-Reticuloendotheliosis virus group.

PI Expression vectors containing IRES and/or encapsidation enhancer -

Texpression vectors containing IRES and/or encapsidation enhancer -

Texpression vectors containing IRES and/or encapsidation enhancer -

Texpression vectors containing IRES and/or encapsidation also of escribes nucleotide sequence from the 5' end of the genomic RNA of Retrovirus other than FMLV and MOMLV of the genomic RNA of a type A (RFV-A). The specification also describes nucleotide sequence derived from all or part of the 5' end of the genomic RNA of a type C retrovirus other than Friend murine leukaemia virus (MOMLV). The 5' derived sequences are used as an internal ribosome entry site (IRES) in a vector for permitting or enhancing the encapsidation of a retroviral vector. The vectors can be used for gene therapy, production of recombinant polypeptides or production of transgenic animals.

PR Recombinant vaccine against fowlpox virus - is free of contamination per from reticuloendotheliosis virus, used to prevent the virus occurrence in chickens

PR Recombinant vaccine against fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (REV), and whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens can be revent the occurrence of fowlpox virus in chickens. The chickens can be revent the occurrence of fowlpox virus in chickens older than 1 day can be vaccinated with the vaccine subsequent to vaccination with representation provirus of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a recombinant fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (REV), and those genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens older than 1 day can be vaccinated with the vaccine subsequent to vaccination with the vaccine fell strains at 1 day of age. Prior vaccine and field strains of FPV M (FPV mild strain) at 1 day of age. Prior vaccine and field strains carry a near full length provirus of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced. Sequences x26110-115 represent FPV C molecule can comprise a FPV LTR sequence selected from the above.

IN DORNDURG RC;
IN RECOMBINANT retrovirus vector, contg. non-retroviral gene, - has ability to produce progeny virus, in helper cell which can infect recombinant retrovirus provirus
Example; Page 14-16; 28pp; English.
C New recombination-free, highly efficient retroviral vectors peoill-R1 (given in Q76038), pp0111-R2 (Q76039) and pp0111-R3 (Q76040) were obtained by replacing the U3 region of the left LTR of spleen necrosis virus with the IE promoter/enhancer of CMV, and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of Gownstream activation of cellular proto-oncogenes.

Recombinant retrovirus vector, contg. non-retroviral gene, - has bility to produce progeny virus, in helper cell which can infect host cell and form provirus

Example; Page 16-17; 28pp; English.

C New recombination-free, highly efficient retroviral vectors

C pPO111-R1 (given in Q76038), pPO111-R2 (Q76039) and pPO111-R3

C (Q76040) were obtained by replacing the U3 region of the left

C LTR of spleen necrosis virus with the IE promoter/enhancer of CMV

C and extension of the encapsidation region. The vectors allow

C cell-type specific gene expression and eliminate risks of

downstream activation of cellular proto-oncogenes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vaccinated at older than 1 day of age. Alternatively, chickens older than 1 day can be vaccinated with the vaccine subsequent to vaccination with FPV M (FPV mild strain) at 1 day of age. Prior vaccine and field strains of FPV carry integrated REV sequences. Some of the FPV strains carry a near full length provirus of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced. Sequences x26110-115 represent FPV long terminal repeat sequences. The new recombinant FPV nucleic acid molecule can comprise a FPV LTR sequence selected from the above. Sequence 296 BP; 75 A; 58 C; 81 G; 82 T;

Also described are chimeric genes comprising the ADA2 nucleic acid sequence operably linked to suitable regulatory the ADA2 nucleic acid sequence operably linked to suitable regulatory calter the expression level of a homologue of the yeast ADA2 protein, alter the expression level of a homologue of the yeast ADA2 protein, are normally regulated by ADA2, using antisense or co-suppression contects are normally targeted by factors with which ADA2 interact; and (ii) to compound that inhibit ADA2, potentially useful as herbicides. Fragments of the ADA2 nucleic acid sequence (or synthetic primers based on it) are used in hybridisation screens to obtain sequences encoding companing genes (e.g. for plant breeding) or to identify loss of function mapping genes (e.g. for plant breeding) or to identify loss of function cutant phenotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus of stored on computer readable medium and used in the production of proteins at the invention. The DNA sequences are recorded on a computer readable medium and used in the production of protein sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access the S. aureus DNA sequences allows putative functions to be assigned so that protein encoding or regulatory regions of commercial, therapeutic or clikely to encode antigens have been identified and these polypeptides can also be used in a vaccine composition against S. aureus infection of S. aureus in a sample. S. aureus in fection of S. aureus in a sample. S. aureus in fection of S. aureus in a sample. S. aureus in singulative polypeptides can be used in a kit for the immunodetection of S. aureus in a sample. S. aureus infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences of any of the S. aureus DNA sequences contained on the computer readable medium.

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Buchet and Genevieve Payan. It has been constructed in the vector pBeloBAC11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota;

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Muscomorpha; Ephydroidea; Drosophi

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP)
http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC
project grant. The DNA was prepared from embryos by Alain Buchetcand Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 th 4.1%; Score 38.2; Similarity 12.2%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's p1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Submitted (02-JUN-1999) Genoscope - Centre National de Sequencay BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns. - Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part o collaboration with the Berkeley Drosophila Genome Project (BDGP) The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and melanogaster BAC library was prepared by Kazutoyo Osoegawa and
